# TAKIS JOINS NATIONAL CENTER FOR MRNA AND GENE THERAPIES

**Italy** is a leading pharmaceutical producer in Europe but **produces few innovative products**. Most **investments primarily target later stages of the drug supply chain**, focusing on product enhancement, administration, and packaging.

**National Center for mRNA and Gene Therapies** at the University of Padua is **addressing this innovation gap. Takis**, alongside 16 pharmaceutical companies and 32 research institutes, **actively participates in this hub** that wants to become a **focal point in European research for precision medicine.**

**Takis** will **contribute** with its expertise in **target selection, nucleic acid manufacturing, vaccination in predictive models, and in vivo CAR-T cells.**

We believe in the power of **public-private collaboration** to pave the way for groundbreaking solutions in vaccines and therapies.

**STAY TUNED AND  
FOLLOW US FOR FUTURE  
UPDATES**  **@TAKIS**
